

## Vacuum generators VADM/VADMI

**FESTO**

## Key features

### Product overview

All vacuum generators from Festo have a single-stage design and operate according to the Venturi principle.

The product series described below have been designed for a wide range of applications. The different performance classes of the individual product series make it possible to select vacuum generators tailored to suit the specific requirements of each application.

### Standard and inline ejectors

VN

Datasheets → Internet: vn

- Nominal width  
0.45 ... 3 mm
- Max. vacuum  
93%
- Temperature range  
0 ... +60 °C
- A range of extremely effective generators suitable for use directly in the working area
- Available as a straight or T-shaped design
- Small footprint
- Cost effective
- No wearing parts
- Extremely fast evacuation time
- Optional vacuum switch
- Optional additional functions:
  - Integrated ejector pulse
  - Electrical control for vacuum ON/OFF
  - Combination of ejector pulse and actuation

VAD/VAK

Datasheets → Internet: vad

- Nominal width  
0.5 ... 1.5 mm
- Max. vacuum  
80%
- Temperature range  
–20 ... +80 °C
- Range of vacuum generators with sturdy aluminium housing
- VAK-...: integrated volume,  
VAD-...: connection for external volume
- Maintenance-free
- VAK: reliable setting down of workpieces

## Key features

## Compact ejectors

OVEM

Datasheets → Internet: ovem

- Nominal width  
0.45 ... 2 mm
- Max. vacuum  
93%
- Temperature range  
0 ... +50 °C
- Compact design
- Minimal installation effort
- Short switching times
- Integrated solenoid valves for vacuum ON/OFF and ejector pulse
- Filter with display
- Vacuum sensor with LCD display for continuously monitoring the entire vacuum system
- Optional air-saving function
- Reliable setting down of workpieces
- Linking multiple vacuum generators on a common supply manifold

## VADM/VADMI

→ page 7

- Nominal width  
0.45 ... 3 mm
- Max. vacuum  
85%
- Temperature range  
0 ... +60 °C
- Compact design
- Minimal installation effort
- Short switching times
- Integrated solenoid valve (on/off)
- VADMI: additional integrated solenoid valve for ejector pulse
- Filter with display
- Optional air-saving function
- Optional vacuum switch
- Reliable setting down of workpieces

## VAD-M

Datasheets → Internet: vad-m

- Nominal width  
0.7 ... 2 mm
- Max. vacuum  
85%
- Temperature range  
0 ... +40 °C
- Compact design
- Minimal installation effort
- Short switching times
- Integrated solenoid valve (on/off)
- VAD-M-I: additional integrated solenoid valve for ejector pulse
- Reliable setting down of workpieces

## Key features

### At a glance

- Compact and sturdy design
- Components with numerous individual functions form a single unit
- Extremely short switching times thanks to integrated solenoid valves
- No external or additional components required
- Easily fitted thanks to compact dimensions and therefore particularly suitable for handling tasks
- Cost-effective assembly as the solenoid valve, vacuum generator and silencer are all in a single unit
- Degree of protection IP65
- With manual override
- With integrated silencer for reducing exhaust noise
- With integrated filter for the air to be evacuated and an inspection window which shows the degree of filter contamination
- With or without integrated vacuum switch to monitor the vacuum with PNP or NPN output
- Optionally with 2 vacuum ports

### Vacuum generator VADM

The compressed air supply for these vacuum generators is controlled by the integrated solenoid valve. When the power supply is switched on, the valve is actuated and the flow of compressed air generates a vacuum at the vacuum ports using the ejector principle. Suction stops when the power supply to the valve is switched off. The integrated silencer reduces exhaust noise to a minimum. With the vacuum generators VADM-...-P/N, the vacuum can be monitored using a vacuum switch.

- Integrated solenoid valve for:
  - Vacuum ON/OFF

### Vacuum generator VADMI with ejector pulse

Compressed air enters the vacuum generator when a voltage signal is applied to the integrated solenoid valve, thereby creating a vacuum. Once the voltage is switched off at the vacuum valve and switched on at the ejector pulse valve, the vacuum is rapidly purged at port 2 as a result of the application of pressure. The integrated silencer reduces exhaust noise to a minimum. With the vacuum generators VADMI-...-P/-N, the vacuum can be monitored using a vacuum switch.

- Two integrated solenoid valves for:
  - Vacuum ON/OFF
  - Ejector pulse
- With sensing interface
- With integrated check valve as safety function
- Air-saving function possible in combination with a vacuum switch and a higher-level logic circuit (e.g. PLC)

### Vacuum generator VADMI-...-LS with ejector pulse and air-saving function

This vacuum generator has an identical design to the other VADMI types. This ejector also has an integrated vacuum switch with air-saving function: If the pressure drops below the set vacuum range, vacuum generation is switched on automatically.

- Two integrated solenoid valves for:
  - Vacuum ON/OFF
  - Ejector pulse
- With sensing interface
- With integrated check valve as safety function
- Vacuum switch for pressure monitoring
- Integrated air-saving function
- Cable kit with plug sockets for solenoid coils and vacuum switches included in the scope of delivery

## Key features

### Air-saving function with VADMI-...-P/N and external controller

Conventional vacuum switching → A cost-effective energy saving measure

The vacuum range for holding the workpiece is set on the vacuum switch using the two potentiometers. The lower limit defines the minimum value.

Provided the vacuum level is within this range, reliable workpiece transport is guaranteed.

The vacuum generator VADMI is only activated by the external controller if the level drops below the minimum value and is deactivated again once the maximum value is regained.

A check valve prevents the vacuum level from being reduced during the inactive phase of vacuum generation.

### The functional sequence

- |                                     |                    |
|-------------------------------------|--------------------|
| RP Solenoid valve for ejector pulse | E Vacuum generator |
| VG Solenoid valve for vacuum ON/OFF | D Check valve      |
|                                     | C Ejector pulse    |
|                                     | A Vacuum switch    |

### Vacuum on

- [1] External controller F switches on the VG solenoid
  - Valve for compressed air supply B is opened
  - Vacuum generation E is activated

### Vacuum stop

- [2] The specified maximum level is achieved:
  - Vacuum switch A sends a signal to external controller F
  - Controller switches VG solenoid off
  - Vacuum generation E is interrupted
  - Check valve D prevents the vacuum level from being reduced

### Vacuum on

- [3] Leakage causes the vacuum level to drop to the minimum value
  - Vacuum switch A sends a signal to external controller F
  - Controller F switches VG solenoid back on
  - Vacuum generation E is active again
  - Constant repetition of points 2 and 3

### Cycle ended: vacuum off

- [4] Transport process is ended
  - External controller F deactivates VG solenoid
  - Vacuum generation E is ended
  - External controller F switches RP solenoid
  - Ejector pulse C is activated
  - Workpiece is set down

## Key features

### Air-saving function and fault signal with VADMI-...-LS-P/N

Further development of the vacuum switch

When combined with the supplied cable kit, the vacuum generator VADMI-...-LS-P/N has an air-saving function. The vacuum range for holding the workpiece is set on the vacuum switch using the two potentiometers.

The vacuum switch generates a pulsating signal which only actuates the solenoid for vacuum ON/OFF in the vacuum generator when the vacuum has fallen below the minimum value, for example due to leakage.

At all other times, the vacuum is maintained with the help of the check valve, even when the vacuum generator is not switched on. In addition, a status signal A1 can be interrogated which is connected to +24 V during normal operation, but which is switched to 0 whenever vacuum again falls below the critical value by 150 mbar due to a malfunction. This is the case, for example, if the workpiece has dropped off from the suction gripper and it is therefore no longer possible to generate the selected vacuum range.

The three control and supply cable harnesses are combined in one branch. Just one cable, containing one core for the signal and three cores for the power supply, is routed from the branch to the PLC.

Given the decentralised control of the switching function, external actuation of the vacuum switching (air-saving function) would be superfluous. As a result, there is significantly less wiring.

**Note**  
The vacuum switch may only be operated with the included cable kit.

### The functional sequence

### Start signal

- [1] External controller F activates the vacuum switch
  - Vacuum switch A checks the vacuum status
  - No vacuum present

### Vacuum on

- [2] Vacuum switch activates the VG solenoid
  - Valve for compressed air supply B is opened
  - Vacuum generation E is activated
- [3] Vacuum level exceeds 150 mbar below the maximum level
  - Vacuum switch sends a release signal to the external controller F
  - Transport process can start

### Vacuum stop

- [4] The specified maximum level is achieved
  - Vacuum switch A switches VG magnet off
  - Compressed air supply is stopped
  - Vacuum generation E is interrupted
  - Check valve D prevents the vacuum level from being reduced

### Vacuum on

- [5] Leakage causes the vacuum level to drop to the minimum value
  - Vacuum switch A switches VG solenoid back on
  - Vacuum generation E is active again

### Fault: transport stop

- [6] Major leakage causes an overly large drop in the vacuum level
  - Vacuum generator E cannot compensate for the drop in level
- [7] Vacuum level falls to 150 mbar below the minimum value
  - Vacuum switch A sends an error message to external controller F
  - External controller F stops the transport process
  - Vacuum generation E is ended

### Cycle ended: vacuum off

- [8] Transport process is ended
  - External controller F deactivates VG solenoid
  - Vacuum generation E is ended
  - External controller F switches RP solenoid
  - Ejector pulse C is activated
  - Workpiece is set down

- |                                     |                    |
|-------------------------------------|--------------------|
| RP Solenoid valve for ejector pulse | E Vacuum generator |
| VG Solenoid valve for vacuum ON/OFF | D Check valve      |
|                                     | C Ejector pulse    |
|                                     | G Branch           |
|                                     | A Vacuum switch    |

 **Note**

For vacuum generators VADMI-...-LS-P/N, the cable kit with plug sockets for solenoid coils and vacuum switches is included in the scope of delivery.

These vacuum generators may only be operated with the cable supplied.

## Accessories

Ordering data – Plug socket MSSD					Datasheets → Internet: mssd	
	Description	Electrical connection	Cable connection	Part no.	Type	
	For VADM/ VADMI-45/70	Angled socket	Insulation displacement connector	<b>185521</b>	<b>MSSD-ZBZC</b>	
	For VADM/ VADMI-95/ 140/200/300	Angled socket, 3-pin, type C, to EN 175301-803	Screw terminal PG7	<b>151687</b>	<b>MSSD-EB</b>	
			Screw terminal M12	<b>539712</b>	<b>MSSD-EB-M12</b>	
		Angled socket, 4-pin, type C	Insulation displacement connector M14	<b>192745</b>	<b>MSSD-EB-S-M14</b>	

Ordering data – Connecting cable KMYZ-2					Datasheets → Internet: kmyz		
	Description	Electrical connection		Switching status indication	Cable length [m]	Part no.	Type
	For VADM/ VADMI-45/70	Angled socket, 2-pin, square design	Open cable end	LED	2.5	<b>34997</b>	<b>KMYZ-2-24-2.5-LED</b>
					5	<b>34998</b>	<b>KMYZ-2-24-5-LED</b>
				LED	10	<b>193443</b>	<b>KMYZ-2-24-10-LED</b>
			Straight plug, 3-pin, M8x1	LED	0.5	<b>177676</b>	<b>KMYZ-2-24-M8-0.5-LED</b>
					2.5	<b>177678</b>	<b>KMYZ-2-24-M8-2.5-LED</b>

Ordering data – Plug socket with cable KMEB					Datasheets → Internet: kmeb		
	Description	Electrical connection		Switching status indication	Cable length [m]	Part no.	Type
	For VADM/ VADMI-95/ 140/200/300	Angled socket, 3-pin, type C, to EN 175301-803	Open cable end	LED	2.5	<b>151688</b>	<b>KMEB-1-24-2.5-LED</b>
