

Reverse jet pulse valves VZWE, solenoid actuated

# Reverse jet pulse valves VZWE, solenoid actuated

Key features and product range overview

## Function

Reverse jet pulse valves VZWE are piloted 2/2-way valves. They generate pulses of compressed air using a suitable solenoid coil for mechanically cleaning filters and dust filter systems. The valves are actuated using short electrical pulses.

These pulses generate short pulses of compressed air at the output of the valve, which travel through the filter against the normal direction of flow of the filter system to release adhering particles from the filter.

## General information

-  - Connecting thread  
G 3/4 ... G 2 1/2
-  - Flow rate Kv  
15 ... 210 m<sup>3</sup>/h

## Design

- 2/2-way NC valve with diaphragm

## Advantages

- High flow rates
- Fast opening and closing times
- Sturdy pilot system

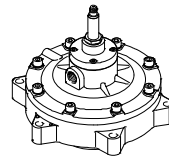

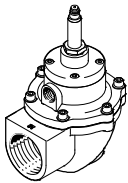

## Application

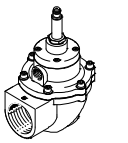

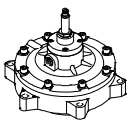

- Used in various filter systems for cleaning the filter elements
- Product filter systems
- Supply air filter systems
- Exhaust air filter systems
