

Compact cylinders ADN/AEN, to ISO 21287

FESTO

Key features

At a glance

Sensor slots on three sides for flush mounting of proximity switches

Piston rod with choice of male or female thread

Mounting option:
Female thread and through-hole

Centring hole in the end cap suitable for centring pins ZBS

Magnet for contactless position sensing

Integrated cushioning for absorbing residual energy

More than the standard

- The compact cylinders comply with or are based on the ISO 21287 standard, depending on the piston diameter
- The ADN/AEN is characterised by its compact design and wide range of application thanks to the large number of variants
- The variants can be configured using a modular product system

Powerful

- Integrated cushioning for absorbing residual energy
- Long service life thanks to exceptional cushioning characteristics and low friction values

Convenient

- Easy to mount with a comprehensive range of mounting accessories for just about every type of installation
- Highly flexible thanks to the wide range of variants
- Contactless position sensing using proximity switches

Reliable

- Optimised manufacturing methods, patented technology and more than 40 years of experience in the field of cylinders make Festo and ADN/AEN a great partner

Cushioning types

Cushioning P

Cushioning PPS

Operating mode

- The drive is fitted with polymer elastic end-position cushioning

Operating mode

- The drive has self-adjusting, pneumatic end-position cushioning

Application

- Small loads
- Low speeds
- Small cushioning capacity

Application

- Larger loads
- Higher speeds
- Larger cushioning capacity

Advantages

- No adjustment required
- Saves time

Advantages

- No adjustment required
- Cushioning capacity is four times bigger than ADN-...-P
- Saves time
- Reduces noise

Cushioning capacity of ISO 21287 and ISO 15552

The cushioning capacity of the compact cylinder ADN-...-PPS fills the gap between ADN-...-P and standards-based cylinders to ISO 15552.

ADN-...-KE – with stroke adjustment

- Through piston rod with stroke adjustment
- Adjustment range of the extended end position

Key features

Variants from the modular product system		
Symbol	Key features	Description
	S1 Reinforced piston rod	Increased lateral forces. Absorbs many times more lateral force than a basic cylinder
	S2 Through piston rod	The piston rod can be used for attachment at both ends of the cylinder
	KE Stroke adjustment	Through piston rod with adjustment element mounted on one side. For limiting the extended end position and setting an exact stroke position.
	S6 Heat-resistant seals	Temperature resistance up to max. 120°C
	S10 Constant motion (slow speed) at low piston speeds	<ul style="list-style-type: none"> • Break-away pressure: very low • Dynamic response: suitable for very slow, constant and stick-slip-free movements Application example: slow, constant feed motion
	S11 Low friction	<ul style="list-style-type: none"> • Break-away pressure: very low • Dynamic response: especially suitable for slow movements with considerably reduced system friction • Application example: slow applications where standstill is critical
	S20 Through, hollow piston rod	The piston rod can be used for attachment at both ends of the cylinder. The piston rod is hollow inside. This means it can be used to carry vacuum or compressed air
	...K2 Extended male piston rod thread	–
	...K5 – Special piston rod thread	Metric coarse thread to ISO
	K8 – Extended piston rod	–
	K10 Smooth anodised aluminium piston rod	Ideal for use in welding environments: <ul style="list-style-type: none"> • Protection against welding spatter • Small moving masses • Harder surface compared to steel • Long service life
	KP With clamping unit	Integrated clamping unit on the piston rod
	EL With end-position locking	Positive locking in the end position as a drop guard. If there is a drop in pressure, the cylinder is secured in its end position to prevent it from dropping
	Q Square piston rod	Protection against rotation. For position-oriented feeding
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion- and acid-resistant steel
	R8 Dust protection with scraper	The cylinder has a hard-chrome-plated piston rod and a hard scraper, which protects against dry, dusty media
	TL Captive rating plate	Laser-etched rating plate. Easy identification for spare parts, even after years in a harsh environment
	TT Low temperature	Temperature resistance down to max. -40°C
	F1A Recommended for production plants for manufacturing lithium-ion batteries	Suitable for battery production with reduced Cu/Zn/Ni values (F1a)

 **Note**

These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact velocity:
$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass:
$$m_2 = \frac{2 \times E}{v^2} - m_1$$

V Perm. impact velocity
E Max. impact energy
m1 Moving mass (drive)
m2 Moving payload

 **Note**

The maximum impact energy is still maintained in combination with cushioning PPS.

Max. energy conversion capacity [J]								
Piston ø	20	25	32	40	50	63	80	100
For cushioning PPS	0.65	0.8	1	1.7	2.8	4.8	8	12

Note

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

Datasheet

Impact energy [J]								
Piston \varnothing	20	25	32	40	50	63	80	100
Max. impact energy in the end positions	0.2	0.3	0.4	0.7	1	1.3	1.8	2.5

Note

These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact velocity:

$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass:

$$m_2 = \frac{2 \times E}{V^2} - m_1$$

V Perm. impact velocity

E Max. impact energy

m1 Moving mass (drive)

m2 Moving payload

Forces [N]								
Piston \varnothing	20	25	32	40	50	63	80	100
Theoretical force at 6 bar, advancing	188	295	483	754	1178	1870	3016	4712
Theoretical force at 6 bar, retracting	141	247	415	633	990	1682	2721	4418
Static holding force	350	350	600	1000	1400	2000	5000	5000

Note:

The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must

not exceed the static holding force. The clamping unit is not backlash-free in the clamped condition if varying loads are applied to the piston rod

Actuation

The clamping unit may only be released if the forces at the piston have reached equilibrium. Otherwise, there is a risk of accidents due to sudden movement of the piston rod.

Blocking off the compressed air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

Max. lateral force F_q as a function of projection x

Weight [g]								
Piston \varnothing	20	25	32	40	50	63	80	100
Product weight with 0 mm stroke	282	344	503	789	1268	1894	3973	5497
Additional weight per 10 mm stroke	22	26	29	45	60	68	93	112
Moving mass with 0 mm stroke	53	63	100	173	296	368	755	932
Additional mass per 10 mm stroke	6	6	9	16	25	25	39	39

⚠ - **Note**

Additional measures are required for use in safety-related applications; in Europe, for example, the standards listed under the EC Machinery Directive must be observed.

Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

Mounting position	Any							

⚠ - **Note**

- Screws with a head or similar must not be used in place of end-position locking, as there is a risk that the function will be impaired if they are screwed in too deeply.
- The exhaust bore must not be closed.
- The piston rod can be locked in any stroke position once the drive is brought mechanically into its end position.
- End-position locking has been designed to prevent the load from dropping in case of pressure failure.
- Avoid operating the cylinder using a 3-way valve, especially with the function “mid-position closed” and those with “metallic sealing”. The residual pressure that is enclosed on the locking side of the cylinder can release the locking function.
- The cylinder must not be operated with external stops (e.g. shock absorber, buffer, oil brake, etc.):
 - It may not be possible to reliably reach the internal end position.
 - The locking mechanism can wear out prematurely. (If the pressure in the opposite chamber drops to less than the locking pressure, the locking piston will prematurely fall to its lower end position.)

Datasheet

Operating and environmental conditions		20	25	32	40	50	63	80	100
Piston \varnothing									
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]							
Note on the operating/pilot medium		Lubricated operation $\varnothing 32 \dots 63$ ch case lubricated operation will always be req $\varnothing 20 \dots 25$							
Operating pressure	[MPa]	0.25 ... 1			0.15 ... 1				
	[bar]	2.5 ... 10			1.5 ... 10				
	[psi]	36.26 ... 145			21.76 ... 145				
Ambient temperature 1)	[°C]	-20 ... +80							
Corrosion resistance class CRC ²⁾		2 - Moderate corrosion stress

 2) More information www.festo.com/x/topic/crc

Forces [N]		20	25	32	40	50	63	80	100
Piston \varnothing									
Theoretical force at 6 bar, advancing		188	295	483	754	1178	1870	3016	4712
Theoretical force at 6 bar, retracting		141	247	415	686	1057	1750	2827	4524
Static holding force		250	500			2000		5000	

Sizing example

Note
 When sizing pneumatic cylinders, it is recommended as a basic principle that only 50% of the indicated theoretical forces (see above) be used

Where:
 Mounting position = vertical
 Workpiece load = 44 kg
 $F = m \times g = 44 \text{ kg} \times 9.81 \text{ m/s}^2 = 431.6 \text{ N}$

To be determined:
 Suitable piston diameter

Example with piston diameter 32 mm:
 Theoretical force at 6 bar, advancing = 483 N
 50% of the theoretical force = 241.5 N
 Static holding force with piston diameter 32 mm = 500 N
 The static holding force of end-position locking is within the permissible range (max. 500 N) for a workpiece load of 44 kg (431.6 N); however, the cylinder would be at 89% capacity.
Results:
 A cylinder with a piston diameter of 40 mm is therefore recommended for this application.

Impact energy [J]		20	25	32	40	50	63	80	100
Piston \varnothing									
Max. impact energy in the end positions		0.2	0.3	0.4	0.7	1	1.3	1.8	2.5

Note
 These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact velocity: $V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$

Maximum permissible mass: $m_2 = \frac{2 \times E}{v^2} - m_1$

V Perm. impact velocity
 E Max. impact energy
 m1 Moving mass (drive)
 m2 Moving payload

Max. lateral force Fq as a function of projection x

Theoretical force at 6 bar, retracting	39	65	115	211	373	634	977	1663	2610	4323
Max. impact energy in the end positions	0.04	0.04	0.04	0.08	0.1	0.15	0.18	0.28	0.35	0.7

 **Note**
 These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

Permissible impact velocity:
$$V = \sqrt{\frac{2 \times E}{m_1 + m_2}}$$

Maximum permissible mass:
$$m_2 = \frac{2 \times E}{v^2} - m_1$$

V Perm. impact velocity
 E Max. impact energy
 m1 Moving mass (drive)
 m2 Moving payload

Datasheet

Spring return force F as a function of stroke l

∅ 12 ... 20

∅ 25 ... 100

Note

The friction depends on the mounting position and the type of load. Single-acting cylinders should as far as possible be operated without lateral loads.

Accessories

Clevis foot LBG/LBG-...-R3

The pivot pin is secured against rotation with a spring pin.

Material:

LBG 32 ... 63: Stainless steel casting

LBG 80 ... 125: Spheroidal graphite cast iron

LBG-...-R3: High-alloy stainless steel

RoHS-compliant

Ordering data – Proximity switch for T-slot, magneto-resistive						Datasheets → Internet: smta	
	Type of mounting	Switching output	Electrical connection	Cable length [m]	Part no.	Type	
	Inserted in the slot from above, flush with the cylinder profile, short design	PNP	Cable, 3-core	2.5	574335	SMT-8M-A-PS-24V-E-2.5-OE	
			Plug M8x1, 3-pin	0.3	574334	SMT-8M-A-PS-24V-E-0.3-M8D	
			Plug M12x1, 3-pin	0.3	574337	SMT-8M-A-PS-24V-E-0.3-M12	
		NPN	Cable, 3-core	2.5	574338	SMT-8M-A-NS-24V-E-2.5-OE	
			Plug M8x1, 3-pin	0.3	574339	SMT-8M-A-NS-24V-E-0.3-M8D	
N/C							
	Inserted in the slot from above, flush with the cylinder profile, short design	PNP	Cable, 3-core	7.5	574340	SMT-8M-A-PO-24V-E-7.5-OE	

Ordering data – Proximity switch for T-slot, magneto-resistive						Datasheets → Internet: smta	
	Type of mounting	Electrical connection, outlet direction of connection	Switching output	Cable length [m]	Part no.	Type	
	Inserted into the slot lengthwise	Cable, 3-core, crosswise	PNP	2.5	547859	SMT-8G-PS-24V-E-2.5Q-OE	
				0.3	547860	SMT-8G-PS-24V-E-0.3Q-M8D	
		Plug M8x1, 3-pin, crossways	NPN	2.5	8065028	SMT-8G-NS-24V-E-2.5Q-OE	
				0.3	8065027	SMT-8G-NS-24V-E-0.3Q-M8D	

Accessories

Ordering data – Proximity switch for T-slot, magnetic reed							Datasheets → Internet: sme
	Type of mounting	Switching output	Electrical connection	Cable length [m]	Part no.	Type	
N/O							
	Inserted in the slot from above, flush with the cylinder profile	Contacting	Cable, 3-core	2.5	543862	SME-8M-DS-24V-K-2.5-OE	
				5.0	543863	SME-8M-DS-24V-K-5.0-OE	
			Cable, 2-core	2.5	543872	SME-8M-ZS-24V-K-2.5-OE	
			Plug M8x1, 3-pin	0.3	543861	SME-8M-DS-24V-K-0.3-M8D	
	Inserted in the slot lengthwise, flush with the cylinder profile	Contacting	Cable, 3-core	2.5	150855	SME-8-K-LED-24	
			Plug M8x1, 3-pin	0.3	150857	SME-8-S-LED-24	
N/C							
	Inserted in the slot lengthwise, flush with the cylinder profile	Contacting	Cable, 3-core	7.5	160251	SME-8-O-K-LED-24	

Connecting cables NEBA, straight, M8 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M8x1 A-coded to EN 61076-2-104	Open end	3	2.5 m	8078223	NEBA-M8G3-U-2.5-N-LE3
				5 m	8078224	NEBA-M8G3-U-5-N-LE3

Connecting cables NEBA, straight, M12 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M12x1, A-coded to EN 61076-2-101	Open end	3	2.5 m	8078236	NEBA-M12G5-U-2.5-N-LE3
				5 m	8078237	NEBA-M12G5-U-5-N-LE3

Connecting cables NEBA, angled, M8 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M8x1 A-coded to EN 61076-2-104	Open end	3	2.5 m	8078230	NEBA-M8W3-U-2.5-N-LE3
				5 m	8078231	NEBA-M8W3-U-5-N-LE3

Connecting cables NEBA, angled, M12 connection						
	Electrical connection 1, connection technology	Electrical connection 2, connection technology	Electrical connection 2, number of pins/cores	Cable length	Part no.	Type
	M12x1, A-coded to EN 61076-2-101	Open end	3	2.5 m	8078245	NEBA-M12W5-U-2.5-N-LE3
				5 m	8078246	NEBA-M12W5-U-5-N-LE3

Accessories

Ordering data – Proximity switch, cuboid shape, pneumatic			Part no.		Type		Datasheets → Internet: smpoa	
Pneumatic connection								
3/2-way valve, normally closed								
	Female thread M5		178563		SMPO-8E			
Ordering data – Mounting kit for proximity switch SMPO-8E							Datenblätter → Internet: smb	
Mounting								
	Clamped in T-slot		178230		SMB-8E			
Ordering data – Slot cover for T-slot								
Mounting			Length					
	Can be inserted		2x 0.5 m		151680		ABP-5-S
