

Automation Technology Training Seminars

Designed for machine operators, factory technicians, and engineers

FESTO

Training and Consulting

Technology seminars offered in:

- Fluid Power – Pneumatics/ Hydraulics
- Safety in Pneumatics
- PLC Controls – Siemens/Allen Bradley/CoDeSys
- Mechatronics
- Machine Safety for OEMs and End Users
- Sensor Technology
- Electric Drive Fundamentals
- Electrical/Electronics Technology
- Customized Seminars

Target Audience – End User

Companies

- Machine Operators
- Factory Technicians
- Engineers

Benefits of Training

- Improve employee skills and effectiveness
- Increase productivity
- Improve product quality

Automation Technology Training Seminars

Designed for machine operators, factory technicians, and engineers

What is unique about Festo Training?

- Automation technology fundamentals, not product training.
- Applied learning is the focus – 70% of class time is dedicated to hands-on practice using real industrial components.
- Therefore, there is a direct transfer of knowledge from the classroom to the factory floor.
- Training can be customized to meet the skill needs specific to your customer's production process.
- A Skills Certification acknowledging this achievement is issued to each attendee who completes the course.

Features of Festo Training:

- Festo can conduct a factory audit to tailor the training to the specific requirements of a customer's production process. Special production components can be included in the training course work.
- Pre-assessment tests are provided to attendees to identify the skill gaps that need to be resolved through the training.
- Post-assessment tests are also provided to determine the effectiveness of the learning process.
