

Product Change Notification

DGC(I)-25(-KF/-FA) - Insourcing of Guiding System

Project number:289301

Oct 6, 2025

Version:2

Festo SE & Co. KG

Change description

Technical description:

Reason of change:

The guide system (consisting of guide rail and roller carriages) is being modified for the DGC-25(-KF/-FA) pneumatic linear actuator.

This is due to the insourcing of the guide system, which was previously purchased as a third-party component.

Technical changes:

The change affects the guiding module consisting of carriages and guiding rail.

This change results in a minor modification of the visual appearance of the actuator (changed geometric properties of carriages and guiding rail, changed material and color of guiding rail), but has no impact on the functionality,

interface or installation

dimensions.

Due to the changed geometric properties of the rails and carriages, new spare parts are required; the spare parts carriages for the previous and future guide systems are not compatible. The spare parts for the different versions can be found in the spare parts catalog as soon as they are available.

Identification of changed products (Details):

- Changed geometric properties of the rails and carriages (see pictures)
- Changed rail material and color:
 - old version: stainless steel (silver)
 - new version: Tempered steel, burnished (black)

Visual change:

Category of change:

FORM: X

FIT:

FUNCTION:

This change will become active in production from: Apr 1, 2026
