

Ball screw axes ELGD-BS

FESTO

Key features

At a glance

ELGD-BS (standard design)

- Profile with a square cross section and sturdy drive elements for high feed forces
- With NSF-H1 lubricant for the food zone
- Suitable for the production of Li-ion batteries

ELGD-BS-WD (wide design)

- Reduced profile height offers smaller installation dimensions for handling systems and applications that do not require such high feed forces
- 30% lighter, while rigidity and guide load capacity are still similar to the axis in the standard design
- With NSF-H1 lubricant for the food zone
- Suitable for the production of Li-ion batteries

Innovative guide technology

- Excellent rigidity and load capacity of the guide for greater loads in the same installation space
- Less vibration and smoother slide movement protect sensitive workpieces
- High speeds ensure short cycle times and a very long service life minimises downtime

Powerful drive elements

- High feed forces and acceleration for shorter process times
- Long service life and increased reliability reduce TCO

Innovative stainless steel cover strip solution

- Abrasion-free and clean surface protects workpieces from particles
- Minimised number of particles for use in cleanrooms
- Reduced ingress of dirt for use in harsh ambient conditions

Options:

- Extended or additional slide for higher axial and lateral torques and higher loads

Sealing air connection:

- Air is exchanged between the interior of the cylinder and the environment via the sealing air connection. This prevents negative pressure or excess pressure from building up inside the cylinder.
- Application of slight negative pressure prevents the emission of particles
- Application of slight excess pressure prevents the ingress of particles

Guide axis ELFD

- Driveless linear guide units with guide and freely movable slide
- The guide axis is designed to support forces and torques in multi-axis applications

Key features

Engineering tools

More information → [electric-motion-sizing](#)

Save time with smart engineering tools for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in achieving this goal. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools and useful tools.

Electric Motion Sizing

- Create the optimum drive package quickly and reliably. Electric Motion Sizing calculates suitable combinations of electric axis, electric motor and servo drive using just a few application details. It provides you with all the relevant data including the bill of materials and documentation for the selected combination. This avoids design errors and results in significantly improved energy efficiency for the system. A smooth connection to the Festo Automation Suite also makes commissioning easier for you.

Graphs

More information → [elgd-bs](#)

The graphs shown in this document are also available online. These can be used to display precise values.

Orientation guide

- The side on which the labelling is applied is defined as the front.

Drive system

[BS] Ball screw

- For applications requiring precision
- High reliability and long service life
- For high loads

Stroke reserve

[...H] 0 ... 999 mm

- The stroke reserve is a safety distance from the mechanical end position and is not used in normal operation.
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke.

Screw pitch

- The screw pitch describes the distance travelled by the ball screw nut per revolution of the ball screw in millimetres.
- Thanks to the different screw pitches, it is possible to choose the smallest possible motor for the required speed and feed force.

Ball screw support

[SU] With ball screw support

The ball screw support enables maximum travel speed with all stroke lengths.

Key features

Slide design

| <ul style="list-style-type: none">• With lifetime lubrication (this applies under standard conditions. Please refer to the operating manual for maintenance intervals for specific applications)• Lubrication nipple not included in delivery | <ul style="list-style-type: none">• The lubrication adapters enable the guide to be permanently lubricated using semi- or fully automatic relubrication devices• The adapters are suitable for oils and greases |
|--|--|

Type of mounting	
[M]	Direct mounting
[M7]	Type of mounting for front end use

- | | |
|--|--|
| <ul style="list-style-type: none">• When direct mounting is selected, the axis is supplied with threads in the underside of the profile. It can then be mounted without profile mountings, which saves space• Additional centring holes make it easy to install the axis in the machine | <ul style="list-style-type: none">• Attachments can be fitted on the front of the axis using the front-end mounting feature• Threads are therefore integrated into the underside of the profile on the side facing away from the motor; this, together with an angle kit, makes for stable front-end mounting |
|--|--|

Measurement system	
[M3]	With displacement encoder

The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drivetrain can be detected and corrected by the motor controller

Cleanroom suitability

The axis ELGD is designed for cleanroom applications and tested under typical operating conditions. The ISO class is determined using standardised testing procedures in which particle emissions are measured for several hours until stable values are reached. The classification of the cleanroom class is carried out according to ISO 14644 14 using reliable statistical methods. The tests are carried out with 100% duty cycle. The ISO class is determined over a period of 100 minutes to obtain reliable performance data.

The standard grease used in the ELGD has a low particle emission and is therefore well suited for cleanroom applications.

Our engineering team can carry out a detailed assessment for applications with specific cleanroom requirements and recommend an optimal configuration that is tailored to your process.

Size	60	80	120
Suitable for cleanrooms, measured according to ISO 14644-14	ISO class 4 (vacuum) ISO class 7		

1) In order to achieve the required ISO class, the axis must be cleaned and correctly prepared before commissioning.

Cable length	[mm] 160

Operating and environmental conditions – Displacement encoder

Ambient temperature	[°C] -10 ... +70
Degree of protection	IP64
CE marking (see declaration of conformity)	To EU EMC Directive ¹⁾

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Datasheet

Load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. The appropriate size is selected using the following three steps:

1. Check the maximum permissible values (must not be exceeded)
2. Calculate the load comparison factor
3. Determine the service life

Distance from the slide surface to the centre of the guide

Distance from the slide surface to the centre of the guide

Size	60	80	120
Dimension x [mm]	60	62	80

1. Check the maximum permissible values

Max. permissible forces and torques for the overall axis (strength limits)

Datasheet

Maximum permissible support spacing L as a function of force F

The axis may need to be supported in order to limit deflection in the case of long strokes.
The following graphs can be used to determine the maximum permissible support spacing L as a function of force F acting on the axis. The deflection is $f = 0.5\text{ mm}$.

Size 60

Size 80

Size 120

Datasheet

2. Calculate the load comparison factor

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

This formula can be used to calculate a guide value.

The engineering software "Electric Motion Sizing" is available for more precise calculations

→ www.festo.com/x/electric-motion-sizing

If the axis is subjected to several of the indicated forces and torques at the same time, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F1/M1$ = Values occurring in the application

F_2 = Permissible values at 5000 km from the graph "load as a function of support spacing"

$M2$ = Maximum permissible values (see table)

Max. permissible torques for the guide calculation with reference service life

Size	60	80	120
Slide design	L	L	L
Reference service life [km]	5000		
Max. torque M_x [Nm]	37	95	170
Max. torque M_y [Nm]	15	42	50
Max. torque M_z [Nm]	15	42	60

Permissible guide load as a function of the support spacing

Depending on how firmly the axis is supported, the maximum permissible forces vary due to the design of the guide system.

If the axis is used as a cantilever or in yoke operation, the values for a support spacing of 2000 mm can be selected.

Size 60

Size 80

Datasheet

Permissible guide load as a function of the support spacing

Depending on how firmly the axis is supported, the maximum permissible forces vary due to the design of the guide system.
If the axis is used as a cantilever or in yoke operation, the values for a support spacing of 2000 mm can be selected.

Size 120

Datasheet

3. Determine the service life

The service life of the guide depends on the load. To be able to provide an indication of the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.3.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page) gives a value of 1.3 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 2500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Note:

If the application has been calculated using “Electric Motion Sizing”, the average guide comparison figure represents the workload of the guide. (100% average guide comparison figure corresponds to $f_v = 1$). With this value, the service life can be estimated using the service life graph

Comparison of the characteristic load values for 100 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of the bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGD with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Datasheet

Service life of the ball screw

- The service life of the ball screw axis depends on the service life of the guide as well as that of the drive screw.
The operating coefficient plays a considerable role in determining the possible service life. It can be determined with the help of the table below
- The distance between the foremost and rearmost positions must be at least 2.5 times the screw pitch per travel cycle
- The specifications for the running performance are based on experimentally determined and theoretically calculated data (at room temperature).
The running performance that can be achieved in practice can deviate considerably from the specified curves under different parameters

Calculation of the mean feed force F_{xm} with ball screw

$$F_{xm} = \sqrt[3]{\frac{F_{x1}^3 \cdot s_1 + \dots + F_{xn}^3 \cdot s_n}{s_1 + \dots + s_n}}$$

F_{xm} = Mean feed force
 $F_{x1/n}$ = Feed force of the section
 $s_{1/n}$ = Part of the movement cycle that is travel

Mean feed force F_{xm} as a function of running performance L, with an operating coefficient f_B of 1.0 at room temperature

Datasheet

Mean feed force F_{xm} as a function of running performance L , with an operating coefficient f_B of 1.0 at room temperature
Size 120

Service life taking into account the operating coefficient

$$L_1 = \frac{L}{f_B^3}$$

Medium	1.4 ... 1.6	Press-in operations
High	1.6 ... 2.0	Construction, agriculture

1) Loads caused by impact, temperature, contamination, shock and vibrations

Datasheet

Max. feed force F as a function of the working stroke l

The feed force that pushes the ball screw in the direction of the motor must be limited depending on the stroke due to possible buckling (e.g. acceleration of a load mass away from the motor, deceleration of a load moving towards the motor).
The feed force in the opposite direction is not affected by this.

Dimensions – Angle kit EHAM-AK-E24-80-E24-80-ML-S

Download CAD data → www.festo.com

Sample illustration:

Note:

- Suitable for a three-dimensional gantry design.
- Mounting position: left
- The profile mountings EAHF-E24-60-P-B4 are provided for mounting an axis ELGD onto the angle kit.

For the following combinations:

Base axis: ELGD-BS-80-L, ELGD-TB-80-L

Assembly axis: ELGD-BS-80, ELGD-TB-80, ELGD-BS-WD-100, ELGD-TB-WD-100, ELGD-BS-WD-120, ELGD-TB-WD-120

Peripherals overview

Peripherals overview

Accessories			
	Type	Description	→ Page/Internet
[1]	Ball screw axis ELGD-BS	Electric drive	elgd-bs
[2]	Mounting kit EAHM-E...-AP	For mounting mini slide DGST or EGSC on the slide	55
[3]	Profile mounting EAHF-E24-60-P-B4	The profile mounting EAHF-E24-60-P-B4 is designed for mounting an ELGD axis onto the angle kit EHAM-AK-E24-...	54
[4]	Angle kit EHAM-AK-E24	• Suitable for a cantilever or three-dimensional gantry design • The profile mountings EAHF-E24-60-P-B4 are provided for mounting an axis ELGD onto the angle kit • When used in combination with the angle kit, the axis with a long slide must be selected	55
[5]	Profile mounting EAHF-E24-...-D...	For axis/axis mounting with adapter plate	54
[6]	Angle kit EAHM-E24-AK	• Attachments can be mounted on the front of the axis using the feature front-end mounting "ELGD-...-M7" together with the angle kit. Threads are therefore integrated in the underside of the profile on the side facing away from the motor, which makes for stable front-end mounting	55
[7]	Proximity switch, T-slot SIES-8M	Inductive proximity switch, for T-slot	56
[8]	Slot cover ABP-S	For protection against contamination	57
[9]	Clip SMBK	For mounting the proximity switch cable in the slot	57
[10]	Profile mounting EAHF-E24-...-S	For mounting the axis on the side of the profile	54
[11]	Profile mounting EAHF-E24-...	For mounting the axis on the side of the profile (standard mounting)	54
[12]	Mounting kit EAHM-E15-K	For mounting the axis on the side of the profile	55
[13]	Adjusting kit EADC-E15	Height-adjustable. Can be used to easily compensate for any unevenness in the bearing surface	55
[14]	Sensor bracket EAPM-E24-SHO	For mounting third-party sensors on the axis	56
[15]	Sensor OMRON	Third-party sensor OMRON, EE-SX674 series	–
[16]	Sensor bracket EAPM-E24-SHE	For mounting the inductive proximity switches SIEN-M8 (round design) on the axis	56
[17]	Proximity switch, M8 SIEN-M8	Inductive proximity switch, round design	57
[18]	Adjusting kit EADC-E16	For mounting the axis on a vertical surface. After mounting, the axis must be aligned horizontally	55
[19]	Switch lug EAPM-E24-SLS	For sensing the slide position using inductive proximity switch SIES-8M or for optical sensors (Omron) with sensor bracket EAPM-E24-SHO	56
[20]	Switch lug EAPM-E24-SLE	For sensing the slide position using inductive proximity switch SIEN-M8 (round design) and sensor bracket EAPM-E24-SHE	56
[21]	Motor EMMT	Motors and kits specially matched with the axis Detailed information: www.festo.com/catalogue/eamm Engineering tool: www.festo.com/x/electric-motion-sizing	emmt
[22]	Parallel kit EAMM	For parallel motor mounting	eammm-u
[23]	Axial kit EAMM	For axial motor mounting	eammm-a

Accessories

Permitted axis/motor combinations for axial and parallel kits

Under the following links you will find all the information about:

- Axis/motor combinations
- Permitted third-party motors
- Technical data
- Dimensions

For axial kits → Internet: [eamm-a](#)

For parallel kits → Internet: [eamm-u](#)

Profile mounting EAHF-E24-...-P-S

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	18 g	8197128	EAHF-E24-60-P-S

Profile mounting EAHF-E24-...-P (standard mounting)

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	71 g	8197132	EAHF-E24-60-P

Profile mounting EAHF-E24-...-P-D...

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	ELGD-60 on ELGD-60-L ¹⁾	F1a	Anodised wrought aluminium alloy	87 g	8197131	EAHF-E24-60-P-D5
	ELGD-60 on ELGD-80			119 g	8197129	EAHF-E24-60-P-D4
	ELGD-60 on ELGD-WD-100-L ¹⁾			133 g	8197130	EAHF-E24-60-P-D6
	ELGD-80 on ELGD-WD-100-L			133 g	8197130	EAHF-E24-60-P-D6
	ELGD-80 on ELGD-120-L			165 g	8229954	EAHF-E24-60-P-D7
	ELGD-WD-100-L on ELGD-120-L			165 g	8229954	EAHF-E24-60-P-D7

1) With these combinations, the axis is mounted off-centre on the slide (see dimension L13 on the dimensional drawing with long slide).

Profile mounting EAHF-E24-60-P-B4

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	72 g	8226570	EAHF-E24-60-P-B4

Accessories

Mounting kit EAHM-E15-K

	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised aluminium	242 g	8234422	EAHM-E15-K-60-E24
	For size 80	Anodised aluminium	277 g	8234423	EAHM-E15-K-80-E24

Adjusting kit EADC-E15

	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised wrought aluminium alloy	377 g	8234417	EADC-E15-60-E24
	For size 80	Anodised wrought aluminium alloy	466 g	8234418	EADC-E15-80-E24

Adjusting kit EADC-E16

	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised wrought aluminium alloy	650 g	8234412	EADC-E16-60-E24
	For size 80	Anodised wrought aluminium alloy	715 g	8234413	EADC-E16-80-E24
	For size 120	Anodised wrought aluminium alloy	845 g	8234414	EADC-E16-120-E24

Mounting kit EAHM-E...-AP

	Description	For assembly	Adapter plate material	Product weight	Part no.	Type
	For size 60	EGSC-45/60 DGST-12/16	Anodised aluminium	449 g	8238432	EAHM-E24-AP-60
	For size 80	EGSC-60 DGST-16/20	Anodised aluminium	722 g	8238433	EAHM-E24-AP-80
	For size 120	DGST-20/25	Anodised aluminium	887 g	8238435	EAHM-E26-AP-120

Angle kit EAHM-E24-AK (in combination with mounting type for front end use M7)

	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised aluminium	722 g	8238029	EAHM-E24-AK-60
	For size 80	Anodised aluminium	1378 g	8238030	EAHM-E24-AK-80

Angle kit EHAM-AK-E24

	Description	For assembly	Mounting position	Adapter plate material	Product weight	Part no.	Type
	ELGD-60 on ELGD-80-L	Cantilever systems	Left	Anodised aluminium	2240 g	8240704	EHAM-AK-E24-80-E24-60-ML-L
		Cantilever systems	Right	Anodised aluminium	2240 g	8240705	EHAM-AK-E24-80-E24-60-MR-L
	ELGD-80, ELGD-WD-100, ELGD-WD-120 on ELGD-80-L	Three-dimensional gantry	Left	Anodised aluminium	2580 g	8240706	EHAM-AK-E24-80-E24-80-ML-S
		Three-dimensional gantry	Right	Anodised aluminium	2580 g	8240707	EHAM-AK-E24-80-E24-80-MR-S

Accessories

Switch lug EAPM-E24-...-SLS

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	32 g	8197117	EAPM-E24-60-SLS

Switch lug EAPM-E24-...-SLE

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	20 g	8197116	EAPM-E24-60-SLE

Sensor bracket EAPM-E24-...-SHE

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	103 g	8197123	EAPM-E24-60-SHE

Sensor bracket EAPM-E24-...-SHO

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	67 g	8197121	EAPM-E24-60-SHO

Proximity switch for T-slot, inductive
