General information:

- Resilient and precise T-slot guidance of the gripper jaws
- Oval piston for high gripping forces
- High gripping forces with compact dimensions
- Gripper jaw centring options
- Max. repetition accuracy
- Gripping force backup
- Internal fixed flow control
- Wide range of adaptation options on the drives

Sensors:

- Adaptable position sensor for small gripper sizes
- Integrated proximity switches for medium and large gripper sizes

Flexible range of applications:

- Can be used as a double-acting and single-acting gripper
- Compression spring for supporting or retaining the gripping forces
- Suitable for external and internal gripping

These grippers are not designed for the following or similar application examples:

- Machining
- Aggressive media
- Grinding dust
- Welding spatter

Save time with engineering tools: Smart engineering for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in achieving this goal. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools that will be of use to you.

Gripper selection:

- This tool helps you to select the right grippers by simply entering the exact parameters for your application

Special material properties

Product:

Metals with more than 5% copper by mass are excluded from use. Exceptions are circuit boards, cables, electrical plug connectors and coils

Accessories:

Please contact your Festo representative for information on which accessories are suitable for manufacturing lithium-ion batteries

Position sensing

[A] For proximity sensor

By using proximity switches, any position can be detected.

Characteristics

Gripping force backup

[NC] N/O contact

Closed by spring force in depressurised state

Characteristic load values at the gripper jaws

The indicated permissible forces and torques apply to a single gripper jaw. They include the lever arm, additional applied loads created by the workpiece or external gripper fingers and acceleration forces occurring during movement. The zero coordinate line (gripper jaw guide) must be taken into account when calculating torques.

Gripping force F_H per gripper jaw as a function of operating pressure and lever arm x

The gripping forces as a function of operating pressure and lever arm can be determined from the following graphs.

The gripping torque is not constant across the opening angle.

Gripping force FH per gripper jaw as a function of operating pressure and lever arm x – internal gripping (opening), double-acting – DHPS-35

Datasheet

Gripping force FH per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm x and eccentricity a and b

Gripping force FH per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm x and eccentricity a and b

$$x = \sqrt{a^2 + b^2} = \sqrt{25^2 + 20^2} = 32 \text{ mm}$$

The formula (on the left) must be used to calculate the lever arm x with eccentric gripping.

The gripping force F can then be read from the graphs using the calculated value x.

Calculation example:

Assuming:

Distance a = 25 mm

Distance b = 20 mm

To be determined:

The gripping force at 6 bar, with a DHPS-16 used as an external gripper.

Gripping force FH per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm x and eccentricity a and b

The graph gives a value of F = 79 N for the gripping force.

Datasheet

Spring force F as a function of size and gripper jaw stroke l – gripping force retention for DHPS-...-N...

The spring forces F as a function of the gripper jaw stroke l can be determined from the graph (left).

Spring force F as a function of size, gripper jaw stroke l and lever arm x per gripper finger

To determine the actual spring force F_{tot} , the lever arm x must be taken into account.

Formulas for calculating the spring force F_{tot} per gripper finger:

DHPS-10: $-0.02 \cdot x + 0.5 \cdot F$

DHPS-16: $-0.08 \cdot x + 0.5 \cdot F$

DHPS-20: $-0.1 \cdot x + 0.5 \cdot F$

DHPS-25: $-0.12 \cdot x + 0.5 \cdot F$

DHPS-35: $-0.19 \cdot x + 0.5 \cdot F$

Determining the actual gripping forces F_{Gr} for DHPS-...-NO and DHPS-...-NC as a function of application

The parallel grippers with integrated spring, type DHPS-...-NO (opening gripping force retention) and DHPS-...-NC (closing gripping force retention) can be used as:

- Single-acting grippers
- Gripper with gripping force support and
- Grippers with gripping force retention

To calculate available gripping forces F_{Gr} (per gripper jaw), the data for gripping force F_H and spring force F_{tot} must be combined accordingly.

Determining the actual gripping forces F_{Gr} for DHPS-...-NO and DHPS-...-NC as a function of the application – application

Single-acting:

- Gripping with spring force: $F_{Gr} = F_{tot}$
- Gripping with pressure force: $F_{Gr} = F_H - F_{tot}$

Gripping force support:

- Gripping with pressure and spring force: $F_{Gr} = F_H + F_{tot}$

Gripping force backup

- Gripping with spring force: $F_{Gr} = F_{tot}$

Gripper jaw backlash

The plain-bearing guide used in the grippers means that there is backlash between the gripper jaws and the housing. The backlash values listed in the table have been calculated based on the traditional accumulative tolerance method.

Size	6	10	16	20	25	35
Max. gripper jaw backlash Sz	0.02 mm					
Max. angular gripper jaw backlash ax, ay	1 deg	0.5 deg				

Opening and closing times – DHPS-6 ... 16

The specified opening and closing times [ms] were measured at room temperature, 0.6 MPa (6 bar, 87 psi) operating pressure and with the gripper installed horizontally without additional gripper fingers. For higher masses [g], the grippers must be throttled. Opening and closing times must then be adjusted accordingly.

	Switching output	Switching element function	Electrical connection	Cable length	Part no.	Type
	PNP/NPN, switchable	N/C or N/O contact, switchable	Plug M8, A-coded	0.3 m	★ 8059120	SDBT-MSX-1L-PU-E-0.3-N-M8

Proximity switch SMT-8G for T-slot, magneto-resistive – for sizes 10 ... 35

Link [smt](#)

	Type of mounting	Switching output	Electrical connection	Cable length	Part no.	Type
	Clamped in T-slot, Insertable in the slot lengthwise	3-wire NPN N/O contact	Open end	2.5 m	8065028	SMT-8G-NS-24V-E-2,5Q-OE
			Plug M8, A-coded	0.3 m	8065027	SMT-8G-NS-24V-E-0,3Q-M8D
		3-wire PNP N/O contact	Open end	2.5 m	547859	SMT-8G-PS-24V-E-2,5Q-OE
			Plug M8, A-coded	0.3 m	547860	SMT-8G-PS-24V-E-0,3Q-M8D
