

## Handling modules HSP

**FESTO**

# Handling modules HSP

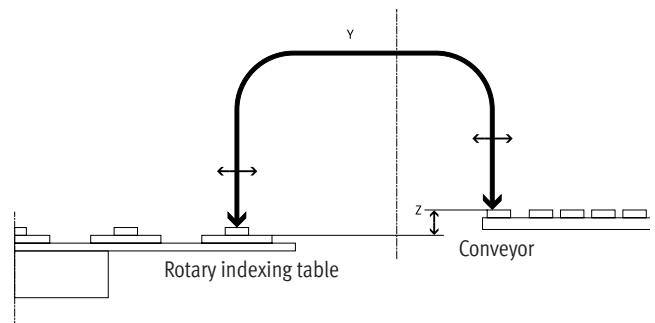

## Key features at a glance

### Application area

The handling module is a new generation of function modules for automatically transferring, feeding in and removing small parts in extremely confined spaces. This is achieved via a force-guided vertical and horizontal motion sequence. A backlash-free cross guide with recirculating ball bearing elements ensures high precision and good rigidity. The combination of semi-rotary drive and slotted guide results in a compact unit for a complete pick & place cycle.

### Special features

- Compact design
- Extremely short cycle times
- Cost-optimized
- Easy to commission
- For payloads up to 1.6 kg
- Stroke adjustment along Y- and Z-axes
- Wait position modules possible
- No planning costs

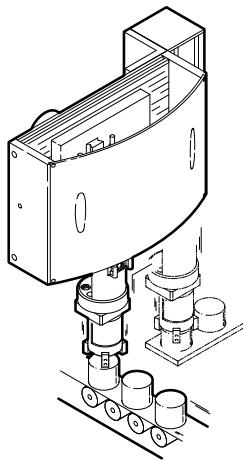

### Product range overview – Three drive variants to choose from

	Pneumatic: HSP-...-AP, with semi-rotary drive DSM	Pneumatic: HSP-...-AS, with drive shaft
<b>Benefits</b>		
	<ul style="list-style-type: none"><li>• Fast</li><li>• Cost effective</li><li>• Ready-to-install</li><li>• No project engineering required</li><li>• Easy to commission</li></ul>	<ul style="list-style-type: none"><li>• Compact</li><li>• Can be used universally</li><li>• Variable drive interface</li><li>• On request: Drive options in combination with servo motors</li></ul>
<b>Technical data</b>		
Stroke	Y [mm]	52 ... 170
	Z [mm]	20 ... 70
Min. cycle time	[s]	0.6 ... 1.0
Payload	[g]	0 ... 1600
Repetition accuracy in the end positions	[mm]	±0.02
Wait positions		Max. 2
Function of the wait position module		Dependent on drive
Repetition accuracy in wait positions	[mm]	< 1
Datasheet		→ Page 7

## Application examples

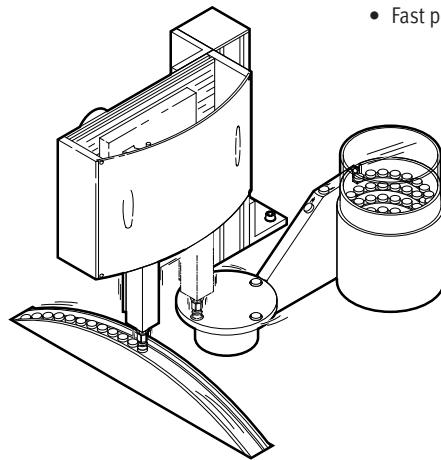

### HSP-....-AP, pneumatic

Linear transfer

- Rapid feeding and removal, e.g. at the linear transfer or at the rotary indexing table

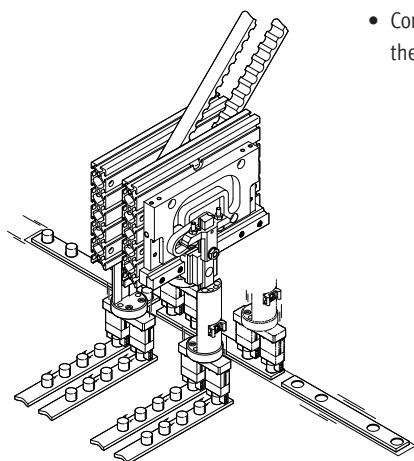

Positioning parts on a belt

- Fast positioning of parts on a belt

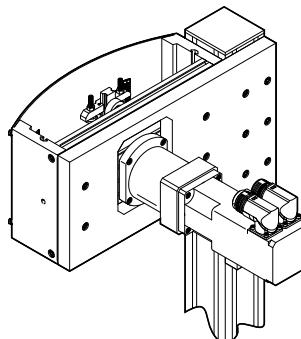

### HSP-....-AS, without drive

Linear transfer

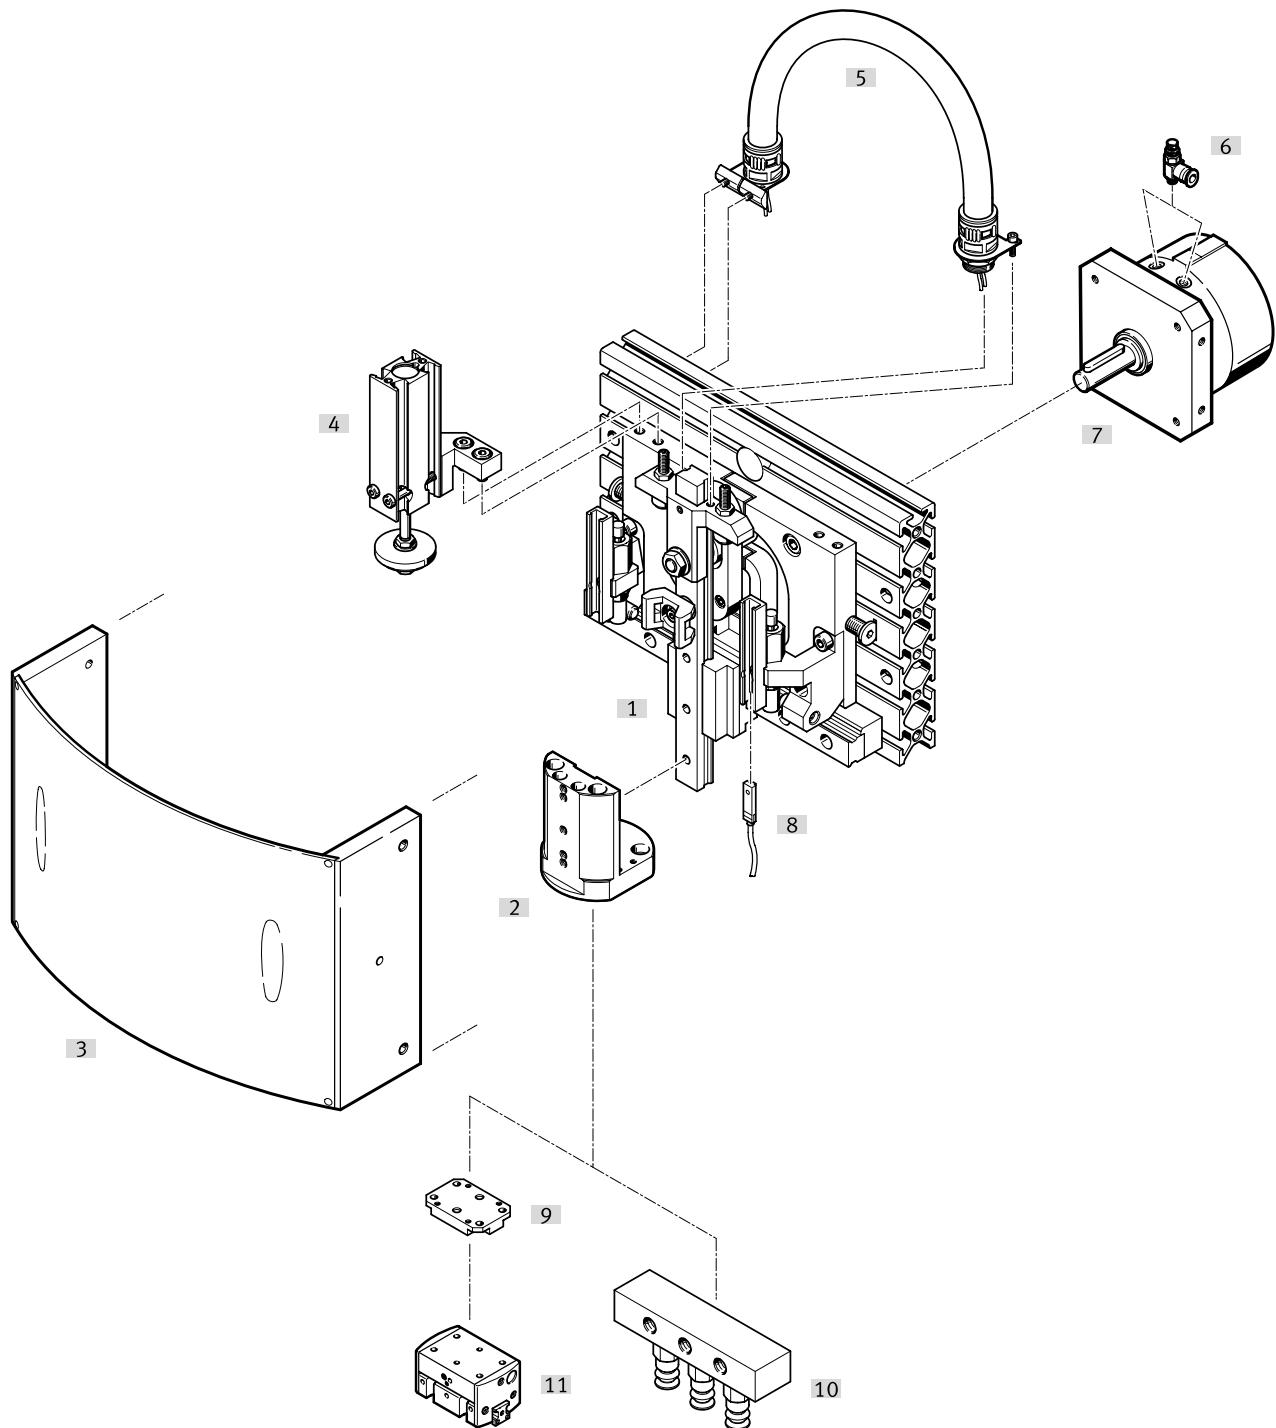

- Compact tandem pick & place at the linear transfer

Rotary indexing table, linear transfer

- Fast and flexible pick & place with servo motor EMMT-AS
- Electric version with third-party motor

Peripherals overview

## Peripherals overview

Accessories	Description	→ Page/Internet
[1] Handling module HSP	Standard module without accessories	7
[2] Adapter kit HAPG	Interface for grippers, semi-rotary drives, etc.	18
[3] Cover kit BSD-HSP	To protect against accidental contact	19
[4] Wait position module BWL-/BWR-HSP	With pneumatic drive: Function for pulling the swivel arm back out of the working area	19
[5] Installation kit MKRP	Conduit to protect electrical cables and tubing	19
[6] Non-return and flow control valve GRLA	For setting the speed of pneumatic drives	grla
[7] Semi-rotary drive DSM	Pneumatic drive, adapted to each size	dsm
[8] Proximity switch SME-/SMT-8	Sensing option for end positions	20
[9] Adapter kit	Interface between HSP and gripper	gripper
[10] Suction cup with connector	Appropriate suction cup for every application	suction cup
[11] Gripper	Parallel/three-point/radial/angle grippers can be attached to the HSP. The appropriate gripper for every application	gripper
– Slot nut HMBN	For mounting the handling module	21

 Repair service
**General technical data**

Type	HSP-...-AP
Pneumatic connection	M5
Operating mode	Double-acting
Design	Semi-rotary drive Cross guide Force-guided motion sequence
Cushioning	Shock absorbers at both ends, soft characteristic curve
Position sensing	Via proximity switch
Type of mounting	With through-hole Via slot nuts
Mounting position	Guide rail, vertical/horizontal

**Operating and environmental conditions**

Type	HSP-...-AP
Operating medium	Compressed air to ISO 8573-1:2010 [7:-:-]
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure [bar]	4 ... 8
Ambient temperature [°C]	0 ... +60

Size	12	16	25	
<b>Y direction</b>				
Stroke [mm]	52 ... 68	90 ... 110	130 ... 170	
<b>Z direction</b>				
Stroke [mm]	Z	20 ... 30	35 ... 50	50 ... 70
Working stroke	Za	5 ... 15	5 ... 20	5 ... 25

**Forces [N]**

Size	12	16	25
<b>Z direction</b>			
Effective force at 6 bar	40	50	65
<b>Y direction</b>			
Permissible process force	30	35	50

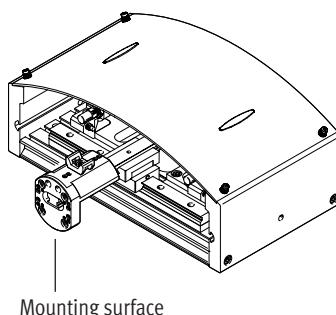

## Datasheet

Weight [g]			
Size	12	16	25
HSP-....-AP	1900	3300	6400
HSP-....-AP-SD	2600	4600	7600
HSP-....-AP-SD-WR	2800	4800	8100
HSP-....-AP-SD-WL	2800	4800	8100

## Repetition accuracy [mm]

For low-vibration operation, the payload should be mounted as close as possible to the guide rail of the handling module.

Repetition accuracy is ensured if the payload (adapter plate, semi-rotary drive and/or gripper, gripper fingers, workpiece) is mounted within the mounting surface of the adapter kit HAPG.

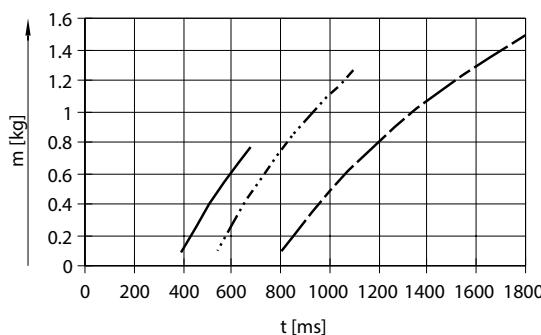

Size	12	16	25
Repetition accuracy in the end positions	±0.01	±0.01	±0.02

## Travel times t as a function of payload m while maintaining repetition accuracy

The travel time  $t$  is taken to be the time the handling module requires to travel from one end position to the other and back.

The payload  $m$  is taken to be the mass mounted on the vertical guide rail (e.g. adapter, gripper, semi-rotary drive and workpiece).

**Note**  
It is possible to obtain higher speeds with the same mass by limiting repetition accuracy.

— HSP-12-AP  
-·- HSP-16-AP  
- - HSP-25-AP

## Cycle times [s]

The cycle time  $t_c$  is the sum of the travel time  $t$  and the dwell time  $t_e$  in the end positions.

$$t_c = t + t_e$$

The minimum cycle time must be complied with.

Size	12	16	25
Min. cycle time	0.6	0.8	1.0

## Example for HSP-12-AP

Step 1:  
The following values are assumed:  
Payload  $m = 0.15 \text{ kg}$   
Dwell time  $t_e = 2 \times 50 \text{ ms}$   
(50 ms per end position)

Step 2:  
The travel time can be determined from the graph:  
 $t = 400 \text{ ms}$

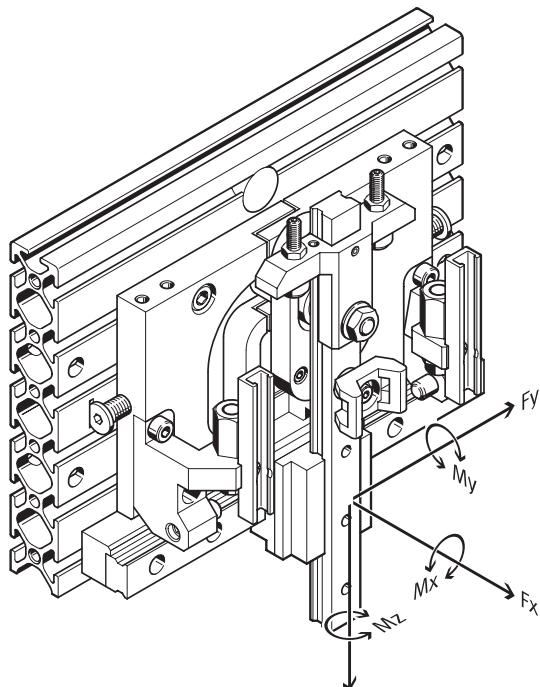

Step 3:  
This gives us a cycle time:  
 $t_c = 400 \text{ ms} + 100 \text{ ms} = 500 \text{ ms}$

Step 4:  
The table shows a minimum cycle time of 600 ms. This means that the movement needs to be throttled.

## Datasheet

## Permissible static/dynamic characteristic load values

Cross guide

- - Note

The torques apply to the centre of the guide carriage.

**Combined load**

The torque equation for the combined load must be satisfied:

$$\frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

M1 = dynamic value

M2 = maximum value

**Dynamic load values**

Size	12	16	25	
Max. torques Mx <sub>perm.</sub> , My <sub>perm.</sub> , Mz <sub>perm.</sub>	[Nm]	1.1	2.4	3.2

**Combined load**

The torque equation for the combined load must be satisfied:

$$\frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

M1 = static value

M2 = maximum value

**Static characteristic load values**

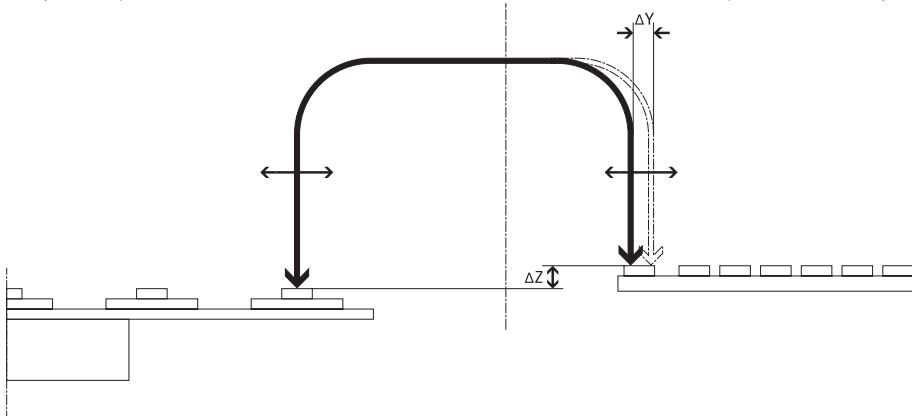

Size	12	16	25	
Max. torques Mox <sub>perm.</sub> , Moy <sub>perm.</sub> , Moz <sub>perm.</sub>	[Nm]	5	10	15

## Datasheet

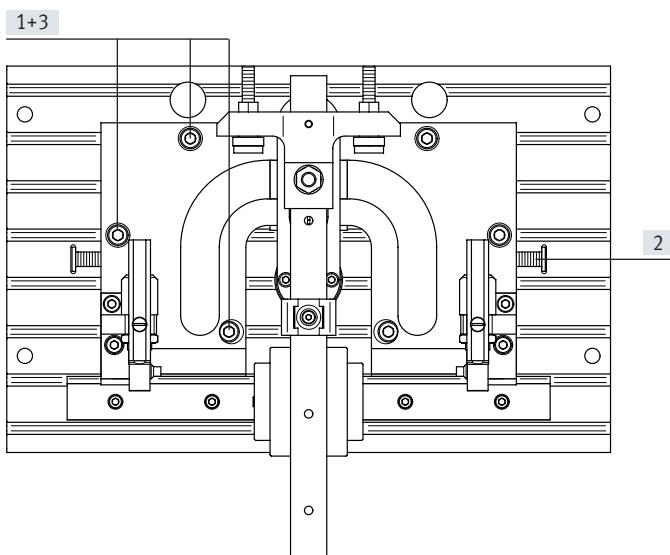

### Stroke adjustment

#### Y-stroke:

Once the HSP is mounted, the Y-stroke of the pick & place position can be adjusted independently of each other.

Y-axis (horizontal)

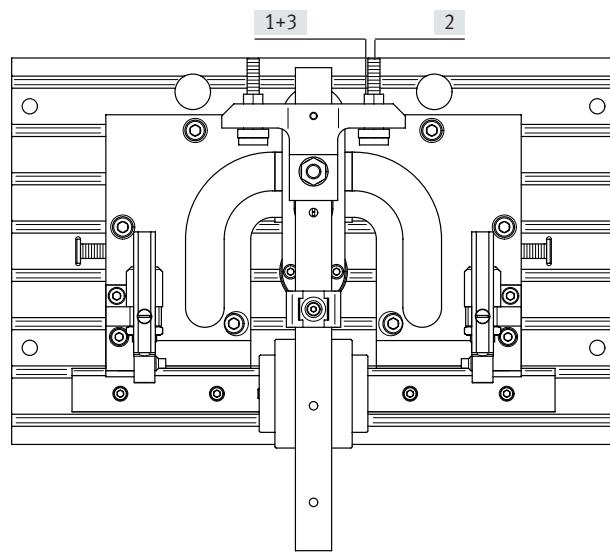

#### Procedure:

- [1] Loosen the screws
- [2] Adjust the guide using the adjusting screw (guide must always rest against the guide rail)
- [3] Tighten the screws

#### Z-stroke:

Differences in height, for example between a rotary indexing table and a transfer system, can be compensated even after mounting.

Z-axis (vertical)

#### Procedure:

- [1] Loosen the lock nut
- [2] Set the required Z-stroke using the set screw
- [3] Tighten the lock nut

## Datasheet

### Wait position module

Application and mode of operation

Figure 1

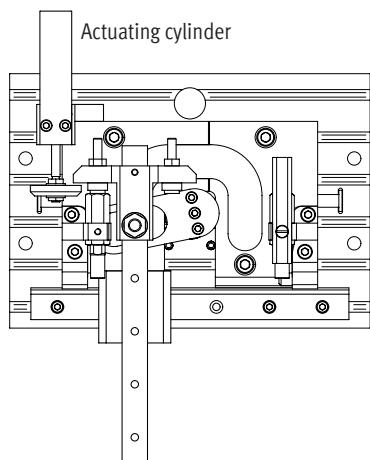

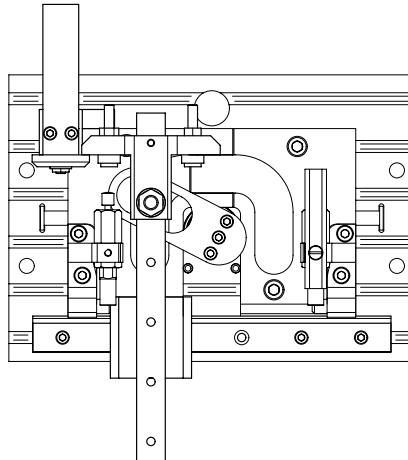

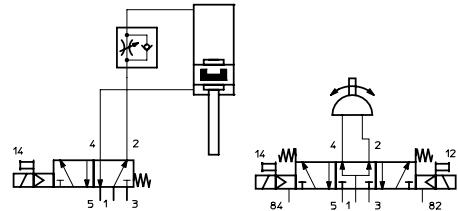

Figure 2

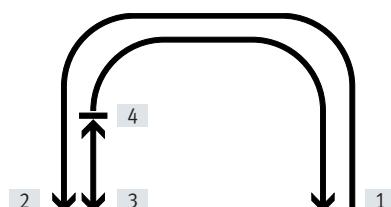

Circuit diagram for HSP with wait position module

- [1] The handling module HSP is in the right-hand end position. The actuating cylinder is advanced in its initial position.
- [2] When the handling module reaches the left-hand end position, the 5/3-way valve is reset. (Figure 1)
- [3] When retracting, the actuating cylinder pulls the handling module upward into its wait position. The operating area is then free. (Figure 2)
- [4] From the wait position, it can be swivelled either into the initial position or into the other end position.

- - - Note

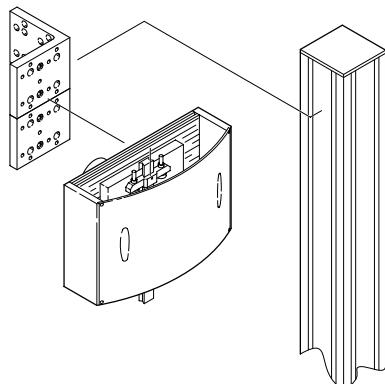

When combined with the wait position module, the handling module HSP must be controlled using a 5/3-way valve (normally open). The actuating cylinder is controlled using a 5/2-way valve. The actuating cylinder can only be used for pulling.

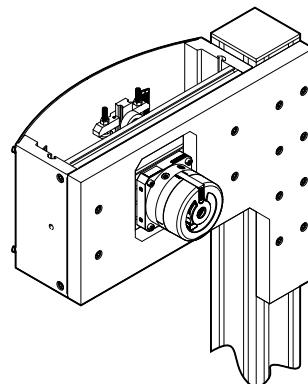

Size	HSP-12	HSP-16	HSP-25
