

Products & services for the biotech/pharmaceuticals industry

Noli nocere!

Freely according to with the principle of the Greek physician Hippocrates

“Noli nocere – never harm the patient”, Festo offers a broad range of proven products and services for reliable automation in the biotech/pharmaceuticals industry. Extremely suitable for use in technical operations rooms.

Primary and secondary production

No matter whether in highly sterile production processes as often required in secondary production or the production of “APIs” by means of biotechnology or precision chemistry in primary production, products and services from Festo will boost your productivity. Flexibility, reliability, availability and security included.

Many satisfied customers in the sector of pharmaceuticals manufacturers and their suppliers, and in the related sectors of process

engineering, for example food and packaging, have gathered excellent experience with products and services from Festo.

Further products and services that optimally meet the hygiene requirements in qualified production rooms are currently being planned.

It goes without saying that they conform to the current GMP and FDA requirements and are based on a long-term understanding of the processes in the biotech/pharmaceuticals industry.

From the plant room to highly sterile production: one partner!
