

Festo stock labels

Reliable logistics!

Transparency enhances reliability. Our labelling system standardises stock labels and processes. And selecting the correct component is made easy thanks to product images.

Clarity equals reliability
Structured stock labels ensure maximum process reliability and minimised error rate due to transparency. At every step of the production process.

Clarity equals speed
Take advantage of the time savings when receiving and retrieving stock as well as the cost savings in warehousing and logistics.

Clarity equals individuality
We have adapted our system development to your individual requirements: different label sizes, standard bar code formats and the most common languages make the stock labels universally applicable. And you determine which information appears on your stock labels.

Product Short Information

Festo stock labels

Reliable, faster, individual logistics: stock labels by Festo

Ideal for all products that have a Festo part number. Optimal ordering quantities are defined as the result of prior order analysis. By putting that information on stock labels you improve your ordering process, save time and costs.

Scanner

Coding the ordering information in common bar code formats makes them easy to integrate in existing resource planning systems. You can use your own scanner or select one of the two scanners recommended by Festo.

- PT/HT 630: large scanner with additional functions such as inventory

- Opticon: small data collector
