

Customised valve terminals

FESTO

Ready-to-install, 100 % tested and adapted exactly to your application: with customised valve terminals from Festo, you too can benefit from a whole range of advantages such as time savings, increased process reliability with reduced process costs and a focus on your core business.

Convenient and reliable

You define – we configure: Festo adapts the valve terminal and all mechanical, pneumatic and electrical interfaces to suit your application perfectly, and delivers directly to your desired delivery address. You don't have to do anything. And you're on the safe side – the responsibility for the technical solution lies with Festo.

Reduced: Process costs

Defined once – process costs reduced by many times: You'll no longer have to plan in time for design and creating drawings and parts lists, nor for the laborious task of ordering all the individual components – sometimes from different suppliers – or the complex task generation. Concerns regarding managing stock of individual components, assembly and testing will also become things of the past.

Product Short Information

Customised valve terminals

From series to customised ...

... there is an unbelievable number of variants for Festo valve terminals.

For series valve terminals ...

... you can mostly find what you need on the Internet: the online configurator in Festo's electronic catalogue can be found at www.festo.com or on DVD. Using this software-supported tool, you can arrange valve terminals easily to suit your individual tastes, including accessories such as connecting cables, mountings and fittings.

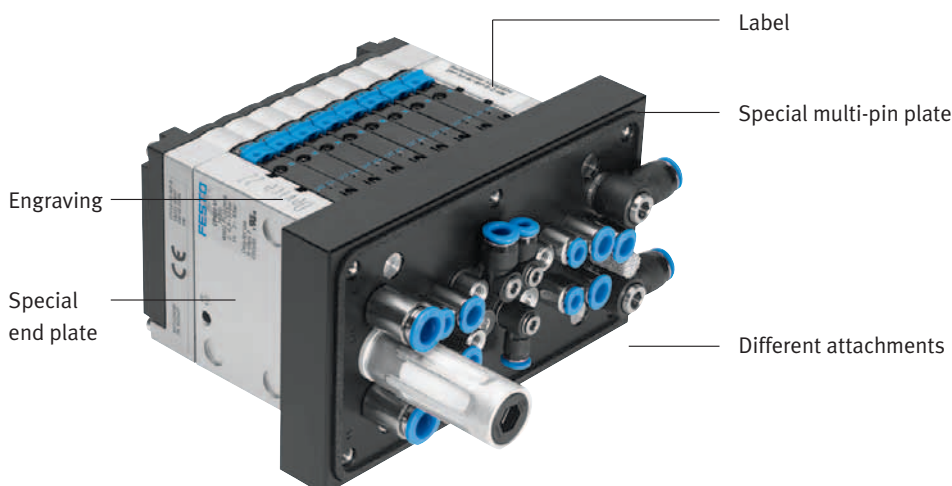

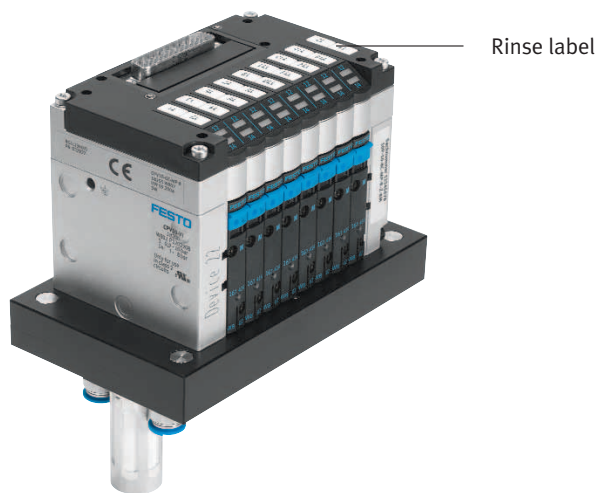

For individual requirements ...

... it's best to ask a Festo sales engineer.

They can offer you further help on specific solutions, e.g.:

- Different attachments, e.g. non-return valves, controllers, silencers and fittings – straight, angled or rotatable
- Connecting cable
- Multi-pin connections in various materials for different interfaces
- Customised labels or engravings
- Special valve functions
- Pressure cut-off/pressure zones

- Additional power supply
- Different feed possibilities via end plates
- Housing in V2a or plastic
- Mountings
- and much more
