Wide range of valve terminals for every application

[A] Four principles – Four choices, depending on the machine and installation concept

1. Central installation

- Standardised solution for centralised installation
- For product or line models
- Designed for a modular structure
- Robust, resistant to welding spatter, flameproof

- Advantages of the concept:
  - Modular configuration
  - High availability

2. Decentralised installation system

- Modular solutions for decentralised installation
- Designed to subdivide different functions
- Robust, resistant to welding spatter, flameproof

- Advantages of the concept:
  - High availability

3. Decentralised installation for upstream functions

- Centralised solution for decentralised installation
- Designed for centralised installation
- Robust, resistant to welding spatter, flameproof

- Advantages of the concept:
  - Centralised service

4. Hybrid installation system (centralised / decentralised)

- Hybrid system for centralised and decentralised installation
- Designed for hybrid installation
- Robust, resistant to welding spatter, flameproof

- Advantages of the concept:
  - High availability

[B] From concept to application: selected industry-specific solutions

Body assembly, heavy equipment engineering

- Body assembly solutions for heavy equipment
- Specialised solutions for heavy equipment assembly
- Robust, resistant to welding spatter, flameproof

Food processing and packaging industry

- Food processing solutions
- Specialised solutions for food processing
- Robust, resistant to welding spatter, flameproof

Light assembly industry

- Light assembly solutions
- Specialised solutions for light assembly
- Robust, resistant to welding spatter, flameproof

[C] The “What’s what” of Festo valve terminals: Selection criteria
