Making things easier

Now even better: FluidDraw stands for fast and easy standardised documentation of your machines or systems. With the new FluidDraw P6, you can create pneumatic and electric circuit diagrams even more reliably and efficiently. In addition to new features and a redesigned interface, the flexible licence models will help you to find the right licence for your needs.

FluidDraw makes it easier to plan complete systems and integrate individual components. You can access the Festo catalogue and your own imported databases, and thus benefit from reporting functions and ready-prepared assembly drawings. The software is part of the Festo engineering tools that provide users with a paperless and smooth approach for all phases, from planning to delivery and commissioning.

Pneumatic circuit diagrams with electric components
Even complex circuit diagrams that contain both pneumatic and electric components can be easily realised with FluidDraw. New in FluidDraw P6 are electrical symbols for motors and controllers from Festo.

New, built-in drawing frame editor
Customise the drawing frames supplied to better suit your needs or conveniently create new drawing frames.
FluidDraw – Plan complete systems more easily

**Project templates**
You can save each created project as a project template that can then be used for further projects. All project settings are retained and are available again in the newly created project. They do not have to be set manually again.

**Flexible lists**
Hugely expand the possibilities to create project reports. There are other predefined reports in addition to the existing ones, e.g. a table of contents with document links and new parts lists.

**Easy expansion options**
Quickly integrate user-defined symbols and libraries. You can integrate your own product databases via the efficient import/export interfaces. For multilingual projects, you can use user-defined text translation tables.

**Drawing and dimensioning functions**
FluidDraw provides built-in drawing functions for custom symbols with all the necessary primitives such as line, polygon, rectangle, circle, ellipse, text, graphics and classified connectors. Smart dimensioning makes it easy for you to create assembly plans.

**New, flexible licence models**
Offer the most appropriate licence for your specific needs. With the FluidDraw 365 annual subscription, you always receive the latest version, at no extra cost. You can purchase the licence for FluidDraw from the Festo App World, which eliminates the use of a hardware dongle. All FluidDraw licences are network licences that can be shared through a licence server or used locally on a PC or notebook. The licences are provided in the form of a ticket immediately after purchase and can be activated directly in FluidDraw. An existing dongle can still be used too.

**FluidDraw licences are available in the Festo App World.**
