Media separated solenoid valve VYKA

Extremely precise!

Whether dosing or operation with continuous flows is what’s needed, with the media separated solenoid valve VYKA you can do both! This powerhouse allows you to dose very small quantities with very compact dimensions. Alternatively, you can take advantage of its uniquely impressive pressure and nominal width specifications and use it to control the media flow in a manifold duct plate, for example.

Maximum performance density
Pressures of up to 2 bar and a Kv value of up to 350 ml/min are not a problem for this solenoid valve. The tiny 7 mm grid makes it suitable for a wide range of applications, e.g. for use with microwell plates.

Flow regulation for high precision
The current control significantly improves the reproducibility of the switching behaviour compared to the voltage control. What’s more, the holding current reduction of the plug-in electronics has a power consumption of 0.3 (hold), which prevents sensitive media from heating up.

Media separation for reliable safety
The separating diaphragms made of high-performance polymers FKM and FFKM mean that the valve can even be used with aggressive media, providing protection whilst simultaneously preventing corrosion. Its low internal volume makes the valve very easy to clean, which is ideal especially for highly sensitive applications.

Highly versatile
VYKA is extremely flexible in use thanks to 3/2, 2/2 (NC/NO) variants and 12 ... 26 V DC actuation.

Highlights
- Very compact: width 7 mm
- FDA listed materials
- Developed to ISO 13485
- Reliable media isolation:
  - Also for aggressive fluids
  - Very easy to clean
- Extremely flexible to use thanks to 3/2, 2/2 (NC/NO) variants and 12 ... 26 V DC actuation
- For dosing and continuous flow applications

Media separated solenoid valve VYKA

The choice is yours

Ideal for the following applications
- Handling liquids, especially in laboratory automation and medical technology
- In vitro diagnostics
- High-precision filling applications with sensitive and aggressive media, e.g. in the perfume and aromatics industry or for packaging contact lenses
- Handling media in the semiconductor industry
- Printing applications

Accessories
- Precise valve actuation with holding current reduction: 1x (VAVE) or 8x (VAEM)
- Fluidic fitting NLFA for aggressive media
  - FDA listed materials (polypropylene)
  - For dosing nozzles and tubing
- PEEK connection module (VABS) M5 or UNF1/4-28
